

AVIATION FOOTPRINTER™ is selected by Eurocypria for emissions reporting

- Eurocypria, with a fleet of six Boeing 737-800s, shares the same low-cost, work-smart ambition as ETS Aviation, the company behind the development of **AVIATION FOOTPRINTER™**

24 May 2010, London – Captain Tony Economides, Ground Operations Manager of Eurocypria, described the software as a “great solution, which passed its trial with flying colours. Additionally its versatility of accepting uploads as well as manual inputs suits Eurocypria’s needs very well.”

AVIATION FOOTPRINTER™ makes uploading data easy and fast. It tracks and totalises the data, and built-in error checking flags inconsistencies. It produces the required annual emissions and tonne/kilometre reports at the click of a mouse. Most importantly it makes the data easily accessible to auditors when the time comes for verification.

Captain Economides continued, “To comply with the regulations we wanted the minimum admin input, but we also recognise our responsibility to track our carbon footprint and look for areas where we can reduce emissions. This system does more than just meet the EU requirements. It gives us a carbon risk management system and helps us locate fuel-saving and emissions efficiency opportunities.”

David Carlisle, CEO of ETS Aviation, said: “We are delighted to be working with Eurocypria. They have put **AVIATION FOOTPRINTER™** through an extensive trial and it’s met all their expectations. We know that the EU’s ETS requirements are dominating in the spotlight at present and operators are looking for a custom-made solution that can easily merge with existing systems and processes. **AVIATION FOOTPRINTER™** is designed to do just that. It’s both operations friendly and auditor friendly, and leading verification bodies are looking at the viability of remote verifications using the system. ETS data held on a web-based system and accessible to verifiers would substantially reduce the auditors’ on-site auditing and travel time. It’s another way we can help to keep costs down, increase efficiency and do our bit for the planet.”

The high level of technical and regulatory expertise already developed by ETS Aviation enables the company to provide highly cost-effective aviation emissions software and outsourcing solutions to airlines, business aviation companies and corporate flight departments of all sizes.

PRESS RELEASE

About ETS Aviation

ETS Aviation Ltd was established in response to the EU's introduction of carbon accounting regulations for the aviation industry in 2009. The company has developed the technology and expertise to not only aid aviation operators in meeting their ETS reporting obligations, but also enable fuel efficiency programmes to sit alongside a fully compliant ETS and carbon footprinting system.

ETS Aviation has worked with operators worldwide, from airlines to small corporate flight departments. ETS Aviation's consultants and partners have expertise in aviation operations, cutting-edge software development and sustainability. This combination is unique and makes ETS Aviation a potent and cost-effective service provider to the aviation industry.

The company is recognised as a leading innovator through its development of the world's first online aviation emissions monitoring and reporting system,

AVIATION FOOTPRINTER™.

AVIATION FOOTPRINTER™ can be linked in to an operator's own flight management software, maintenance tracking systems, electronic flight bag software, or run as a stand-alone system. Its low cost and ease of use make it suitable for airlines, business aviation companies and corporate flight departments of all sizes.

In addition, ETS Aviation's expert consultants backed by online footprinting technology offer a range of outsourcing services and pre-verification services on a subscription basis designed to help operators manage all the ETS monitoring, reporting and verification requirements at a low cost and with ease.

ETS Aviation is a member of BSI's Associate Consultant Programme.
