

Compliance from anywhere in the world

ETS Aviation (stand 1292) is offering business aviation users a new software program called *Aviation Footprinter*, designed exclusively for the aviation industry as a simple-to-use carbon accountancy system.

Accessible from anywhere in the world, 24h a day, seven days a week it is the perfect tool for emissions reporting, analysis and audit. It supports a fuel-saving program and makes handling the data easy.

David Carlisle (left), ETS Aviation chief executive, says: "Regulatory compliance is proving a challenge for many aviation companies. With our technology and

expertise, however, all the required data gets properly organised ready for verification. I'm confident that our approach will help deliver a very cost-effective solution to regulatory compliance for operators of all sizes."

"The system is designed to be pilot friendly, operations friendly and auditor friendly. Leading verification bodies are looking at the viability of remote verifications which would substantially reduce the auditors' on-site auditing and travel time."
