

EFB software includes ETS Solution

- ETS Aviation, specialists in aviation emissions Monitoring, Reporting and Verification software systems and support services, have signed an agreement with On Board Data Systems (OBDS), the Canadian Electronic Flight Bag software specialist

29 April 2010, London – On Board Data System's EFB shell and document management solution is the platform of choice for some of the best-known EFBs on the market. They have over five-hundred flight operations using their ECL, OBDS MFB™ and OBDSsync™ technologies and share the same low-cost, smart-solutions working principle as ETS Aviation.

ETS Aviation's software is known as **AVIATION FOOTPRINTER™** and provides OBDS users with easy, on-board emissions reporting and carbon footprinting application.

Charles Guerin, OBDS President, says, "This is a perfect solution. Our integration system with ETS Aviation allows pilots to enter flight data into a simple form that takes a minute to fill out. The data is then automatically forwarded from the EFB to the **AVIATION FOOTPRINTER™** server, where they manage all the intricacies of the EU Emissions Trading Scheme for a single aircraft, or your entire fleet.

We expect Aviation Footprinting to catch on over here, whether it's a European flight or not. All operators want to do the right thing and have an environmental program that monitors each aircraft's emissions footprint. This system does more than just meet the EU requirements. It will power a carbon risk management system and help locate fuel saving and emissions efficiency opportunities."

David Carlisle, CEO of ETS Aviation, said "We are delighted to be partnered with OBDS on this project. We know that the EU's ETS requirements are dominating the spotlight at present, but operators are already starting to recognize the inevitability of a fully international environmental responsibility regulatory program. **AVIATION FOOTPRINTER™** is designed to be pilot friendly, operations friendly and auditor friendly. In addition to its carbon footprinting and analytical functions, leading verification bodies in the UK are looking at the viability of remote verifications using this system. ETS data held and accessible to verifiers on a web-based system would substantially reduce the auditors' on-site auditing and travel time. It's another way we can help to keep costs down, increase efficiency and do our bit for the planet."

The high level of technical and regulatory expertise already developed by ETS Aviation enables the company to provide highly cost effective aviation emissions software and outsourcing solutions

About ETS Aviation

ETS Aviation Ltd was established in response to the EEC's introduction of carbon accountancy regulations for the aviation industry in 2009. The company has developed the technology and expertise to not only aid aviation operators in meeting their ETS reporting obligations, but also enable fuel efficiency programs to sit alongside a fully compliant ETS and carbon footprinting system.

ETS Aviation has worked with operators worldwide, from airlines to small corporate flight departments.

ETS Aviation's consultants and partners have expertise in aviation operations, cutting edge software development and sustainability. This combination is unique and makes ETS Aviation a potent and cost effective service provider to the aviation industry.

The company is recognized as a leading innovator through its development of the world's first online aviation emissions monitoring and reporting system

AVIATION FOOTPRINTER™.

AVIATION FOOTPRINTER™ can be linked in to an operator's own flight management software or electronic flight bag, or run as a stand-alone system. Its low cost and ease of use make it suitable for airlines, business aviation companies and corporate flight departments of all sizes.

In addition, ETS Aviation's expert consultants backed by online footprinting technology offer a range of outsourcing services on a subscription basis designed to help operators manage all the ETS requirements at low cost and with ease.
