

ETS AVIATION

## ETS Aviation News Release

Date: May 16th 2011

### **Evergreen International Airlines power forward with unique low cost fuel saving solution**

Evergreen International Airlines, the US operator with a fleet of 10 747s is the first in the world to benefit from the latest fuel-saving innovation from Europe-based consultancy, ETS Aviation.

In April, consultants from ETS Aviation completed stage one of their assessment of Evergreen operations. As part of the new Fuelsaver™ Program, the assessment is designed to identify the potential for fuel saving within the operator's current flight operations. For Evergreen, the results were mouth-watering, and showed \$millions of savings were up for grabs - and not just as a one hit, but as a recurring annual cut in the fuel bill.

ETS Aviation's FuelSaver™ programme is a low-cost subscription based service. It starts with an on-site assessment of the current procedures and operations to identify areas of potential improvement. It includes a thorough assessment of already available data, and then software set up to monitor precisely the recommended changes in operational procedures, thereby enabling real time tracking of the outcome of every fuel saving initiative.

**According to Nick Harris of Evergreen Airlines,**  
**, "The initial assessment allowed Evergreen to look into our operating model and to look towards improving our efficiencies. ETS Aviation's staff provided critical data that allowed the Flight Operations Management team to be creative in providing an operations concept that will allow Evergreen to be competitive in a challenging world economy that has produced increased fuel prices. The ETS Aviation team is a class act that provides outstanding customer service 24/7, as a Footprinter customer/user we are extremely pleased with their services and look forward to seeing the Fuelsaver™ Programme".**

ETS Aviation are now offering a stage one assessments, for an Introductory "special low fee"

### **About ETS Aviation**

ETS Aviation specialises in innovative data management systems and on-line consultancy services for aviation companies worldwide.

The company was started in early 2009 by a team of aviation specialists and software developers in response to the EU's introduction of the Emissions Trading Scheme.

The company created *Aviation Footprinter tm* software and the *ETS Support Service* to help operators manage their emissions data and reporting obligations more efficiently. As well as generating the reports required by all EEC member-states, the system also simplifies and speeds up most aspects of internal ETS data management administration. This unique combination of dedicated software and consultancy support has already proved to be a big success.

In 2011, ETS Aviation announced the launch of the *Aviation Fuelsaver™* programme, which combines a new approach to fuel-saving software with industry-leading consultancy included in a low cost, "best in class" software subscription.

The partnership with Aerobytes is testament to ETS Aviation's commitment to high-quality software and value-for-money expertise.
